

→ To create the react application first need to install **node js**

→ In vscode open a folder and run the following commands

`npx create-react-app my-app` ---> used to create the project

(In the above command "**my-app**" is the project name any name we can  
Give Example: `npx create-react-app my-solutions` )

`cd my-app` ---> used to navigate to the project

`npm start` ---> used to run the project

→ Like below the project will be create
